# Batavia, 1882-83: 1:100.000

# Vector data map of Java

## I do not know how to put on QGIS????

# Methodology

The first year: training of GIS-based historical study on colonial city of Batavia

## 1. Putting historical maps on GIS device

- Analysis of land-use in a colonial city and its suburban area (expansion of urban area; construction of canals and water control; development of agricultural fields (sugar and rice), etc.)
- Sources: KITLV (Leiden), National Archives of the Netherlands, NA (The Hague)

## 2. Putting population data (c. 1700, 1750, 1830, 1880, 1930): ethnic population data suggests the occupational distribution

- Sources: VOC Archives (NA), Arsip Batavia (The National Archives of Republic of Indonesia (ANRI), Published Census (1920, 1930)

# Topic 2: Agricultural development of local area(s) in Java

- Land surveys during the 19<sup>th</sup> century
- Population (from the early-19<sup>th</sup> century for the Dutch/English territories): gender/adult-child/ethnicity; census was from 1920 and 1930
- This is a basis for tax farming
- Links to global history?
  - exporting of agricultural products to global market (coffee, indigo, sugar, tobacco...)
- Labor-intensive development (*agricultural involution*)

# Sources

## 1. Text

- Sample survey on land tenure: *Eindresumé van het bij Goevernement besluit d.d. 10 Juni 1867 no. 2 bevolen onderzoek naar de rechten van den Inlander op den grond op Java en Madoera*, I: 1876. II: 1880. III: 1896 (最終提要)

## 2. Population

- Land surveys in the 19<sup>th</sup> century (ANRI, BL)
- Census 1920, 1930: aggregated data only

## 3. Map

# Topic 3: Development of a mining island of Banka

- Developed from 1710
- Typical model of the introduction of Chinese labor and technique)
- Largest mining area in Southeast Asia (cf. Bangka tin was exported as a part of Straits tin in the colonial period of the 20<sup>th</sup> century)
- Sources: Population data are available
