

					Can only be used with Gandhari Unicode font	
Win+a=ā	Win+shift+a=Ā	alt+a=á	Ctrl+alt+a=à	i,u are the same with a	Win+alt+a=á	Win+ctrl+alt=à
Win+r=ṛ	Win+shift+r=Ṛ	Win+f=f̣	Win+shift+f=F̣		Win+alt+crtl+r=ṛ	Win+alt+f=f̣
Win+e=ē	Win+shift+e=Ē	Alt+e=é	Ctrl+alt+e=è	o is the same with e	Win+alt+r=ṛ	
Win+g=ñ	Win+j=ñ̄	Win+n=n̄	ṭḍṃ are the same with ñ			
Win+p=√	Win+z=ś	Win+s=ş	Win+h=ḥ	But, ḷ is not win+l, but alt+l		
<p>I also set some convenient combinations like alt+9=∇. You can use notepad.exe to open this ahk file to have a close look on these combinations. Of course, you can also set your private combinations according to your needs.</p>					<p>I strongly recommend to use LaTeX to print letters like á and so on. Of course, after installing Gandhari Unicode font, you can also input them with this font by using the Microsoft Word. But this will cause ununiformity of fonts and make your text look ugly if you use other fonts like Times New Roman as default.</p>
